

Prioritizing Vulnerabilities with additional Threat intelligence feed from Kenna Security

Process flow:

1. Fetch CVE ID from Vulnerability source (ex: NexusIQ, Tenable Nessus and Aqua Security).
2. Extract Following Threat information for the given CVE
 - a. Easily Exploitable
 - b. Active Internet breach
 - c. Malware Exploitable

API: <https://apidocs.kennasecurity.com/reference#show-vulnerability-definition>

3. Tag this information to the Original CVE source for Prioritization

High level design:
